

WHEELCHAIR RAMPS REIMAGINED

Redispan Ramps

A FRESH CONCEPT IS BORN

The ramp industry had become stale and stagnant. All modular aluminum ramps were essentially functionally identical.

Redispan was born with a vision to shift perceptions, defy expectations, and bring much needed innovation to a static design.

Redispan was designed by installers *for* installers.

PROBLEMS IDENTIFIED

Traditional aluminum modular ramp systems share these same characteristics:

- Bulky & heavy tack welded ramp sections limit custom options
- Tons of small complicated parts
- Assembly on underside of ramp required, and then flipping
- Multiple workers required for install
- Lack of truly custom solutions & field modifications
- No viable ramp rental solution

EASIER ACCESS – NO WELDED SECTIONS

Redispan's ramp sections are truly modular. Our decking slides and interlocks into place, and is then bolted down to the side rail; versus the industry standard of using small tack welds. This unique design offers these characteristics:

- No tack welds which can weaken, fatigue, and break over time
- Shipping cost is greatly reduced, due to smaller packaging
- Section side rails can be cut to needed size, and even modified in the field
- No more per job ordering! Evaluate and install same day

ALL PARTS INCLUDED

At Redispan, we don't nickel and dime our customers when they order a ramp system, by requiring them to buy each and every connector and component separately. Our Ramp in a Box™ products contain all the necessary hardware and components for a complete installation.

- Our Ramp in a Box™ packages include what the competition does not – legs, brackets, transitions, end loops, and more
- Our innovative design uses over 40% less parts than our competitors
- Every component has been meticulously crafted and engineered for optimal strength and durability

TOP-DOWN BUILD – NO FLIPPING REQUIRED

The Redispan team is proud to offer a modular ramp system that is assembled intuitively, from the top down. Never has it been so simple to install a modular ramp in any configuration.

- Our unique slide and lock leg bracket system and section hanger system means no flipping of sections is required upon install
- Unplanned obstructions and last minute changes are no problem. Redispan Ramps can be modified in the field.

A TRUE MODULAR RENTAL SOLUTION

Redispan is proud to offer the first modular ramp system that is truly ideal for the ramp rental market.

- For example, modify an 8 ft. section into a 5 ft. section with ease – simply cut the side rail and slide and lock decking to fit
- Leg and rail post brackets slide in side rail channel with ease. Position them anywhere needed
- Build any configuration completely on site
- Disassemble with ease; use same ramp for completely different rental configuration with simple modifications

DEALER TESTIMONIAL

“Redispan fulfilled everything that they committed to me as a dealer. I have experienced many other manufacturers false claims to commitment to the dealer and the customer, but only Redispan has shown me they are with you all the way. There was no pressure put on me at any time to do anything other than to give them the opportunity to show me the product and the installation process. Everything they communicated to me was true and accurate. The installation process can be done in a timely manner with only one tech. Mostly importantly the ramping is beautiful and strong. I highly recommend Redispan to anyone in need of a modular ramp system. Truly a 5 star experience.”
